Drawings

The drawings are objected to because the appearance of attachment bar 22 in Fig. 1 is not consistent with its appearance in Fig. 2. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

Claims 6-9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 6, "the rod" is further defined. However, as worded in claim 5, the rod has not been claimed.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3 and 6-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tyrer '162 in view of Winkler '904.

Tyrer discloses attachment bar 36 having tabs 37 which support canopy support bars 66A,66B. See clamps in Fig. 6A. What is not shown is the frame. However, Winkler discloses such at 16. It would have been obvious to provide Tyrer with such a frame to further rigidify the device and to rely less on the structure of the golf cart itself for support of the cover. The cart is not being claimed. Consequently, functional limitations referring attachment of the cover thereto are given no weight. Regarding claim 3, since the golf cart is not claimed, functional recitations thereof do not further limit the structure of the cover. Regarding claim 6, see canopy fastener 76. The hook and loop fastener is the full mechanical equivalent of snaps. Regarding claim 10, the specific shape of the attachment bar is dependent on the specific cart environment in which it is to be used and, consequently, is an obvious matter of choice of design. The hook and loop attachment of the canopy to the frame, etc., is taught by Tyrer, see column 5, lines 65-67. Winkler discloses transparent portions 78.

Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Tyrer in view of Winkler as applied above, and further in view of Strange.

Replacing the clamp disclosed in Fig. 6A of Tyrer with a simple C-clamp would have been obvious, as suggested by Strange at 114, so as to render the cover easily mountable and portable.

Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Tyrer in view of Winkler as applied above, and further in view of Peta.

The attachment of a canopy to a frame via C-shaped channel and insert is taught by Peta, Fig. 2. Such is secure, linear, attachment that does not require fasteners. In view of this teaching, it would have been obvious to provide Tyrer with such an attachment.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
